

Study Definitions Workbench User Guide

Dave Iberson-Hurst, 17th December 2024, Version 0.30.0

Access

Go to <https://d4k-sdw.fly.dev/>

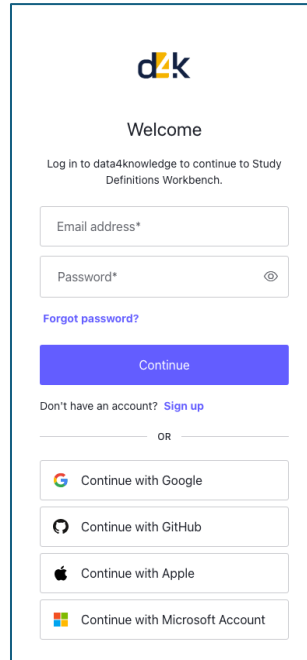

Click on the large button.

Note:

1. *The version will change on this splash screen.*
2. *The tooling is a beta, expect one or two issues.*

Sign Up & Login

You should see a login / sign up screen.

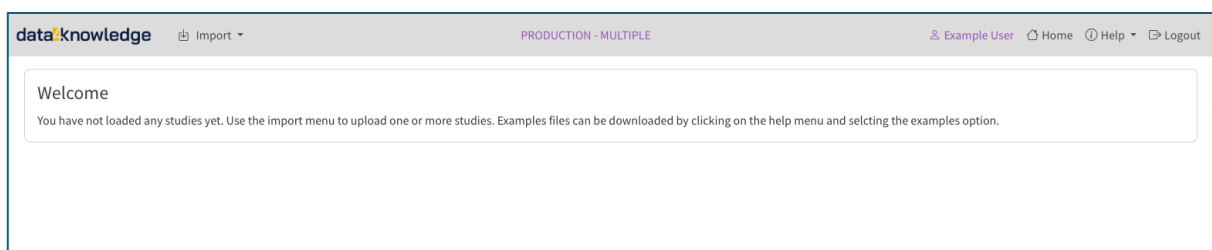

The image shows a login and sign up screen for 'data4knowledge'. At the top is the 'dk' logo. Below it is the heading 'Welcome'. A sub-heading says 'Log in to data4knowledge to continue to Study Definitions Workbench.' There are two input fields: 'Email address*' and 'Password*'. Below the password field is a link 'Forgot password?'. A blue 'Continue' button is below that. Underneath is a link 'Don't have an account? Sign up'. A horizontal line with 'OR' in the center separates the login section from the sign up section. Below the line are four buttons for social login: 'Continue with Google', 'Continue with GitHub', 'Continue with Apple', and 'Continue with Microsoft Account'.

If you do not have an account, please sign up using the available options (email / password, Google, GitHub, Apple or Microsoft- not Office365). Otherwise, login as normal.

Home Page

You should see the home page. On first entering the system no data will be loaded. You can always return to the home page by clicking the “Home” menu option (top right) or clicking the logo image (top left).

The image shows the home page of 'data4knowledge'. The top navigation bar includes the 'data4knowledge' logo, an 'Import' dropdown menu, the text 'PRODUCTION - MULTIPLE', a user profile 'Example User', and links for 'Home', 'Help', and 'Logout'. Below the navigation bar is a 'Welcome' message in a box. The message says: 'You have not loaded any studies yet. Use the import menu to upload one or more studies. Examples files can be downloaded by clicking on the help menu and selecting the examples option.'

Import Data

Currently three types of import are supported:

1. M11 Word Document (.docx)
2. M11 FHIR Message (.json)
3. USDM Excel (.xlsx)

Example M11 Word or USDM Excel files are available via the Help-> Examples (top right) menu.

When data is imported the system maintains separate versions for each study and by type of import. For example, Protocol X loaded from a M11 '.docx' file is kept separate from Protocol X loaded from a FHIR JSON file. This allows them to be compared. The coloured pills indicate the type of load (see below).

M11 Protocol in MS Word (.docx) Import

Click on the import menu and select the M11 Document option. The import page will be displayed.

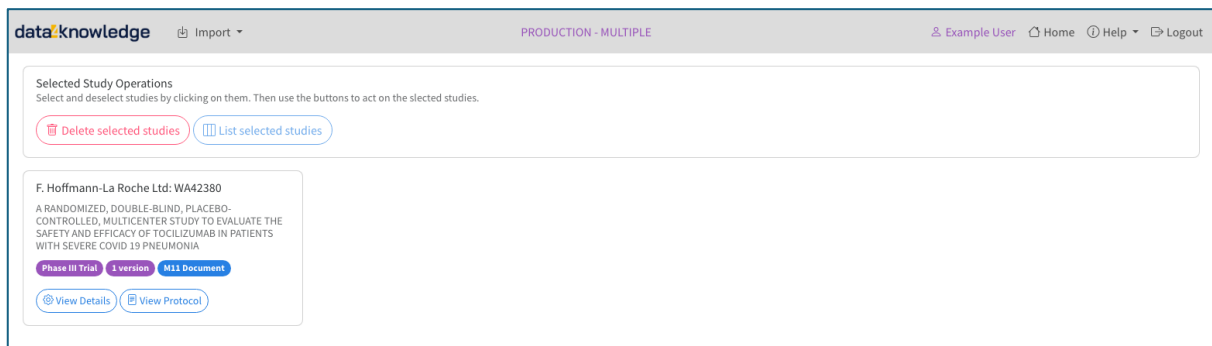

The screenshot shows a web application interface for 'dataknowledge'. At the top, there is a header bar with the logo on the left and navigation links 'Example User', 'Home', 'Help', and 'Logout' on the right. The main content area features a form titled 'Import M11 Protocol' with the subtitle 'Import for a M11 formatted '.docx' file'. Below this, it says 'Select a single M11 file'. There is a file selection area with a button labeled 'Choose files' and a text box showing 'No file chosen'. At the bottom of the form is a blue button with a cloud upload icon and the text 'Upload File(s)'.

Click “Choose Files” and use the normal file selection mechanism to select a single M11 Protocol Word document.

Click “Upload File(s)”. The system will respond saying the file is uploaded and then shortly after a “success” message should appear as follows.

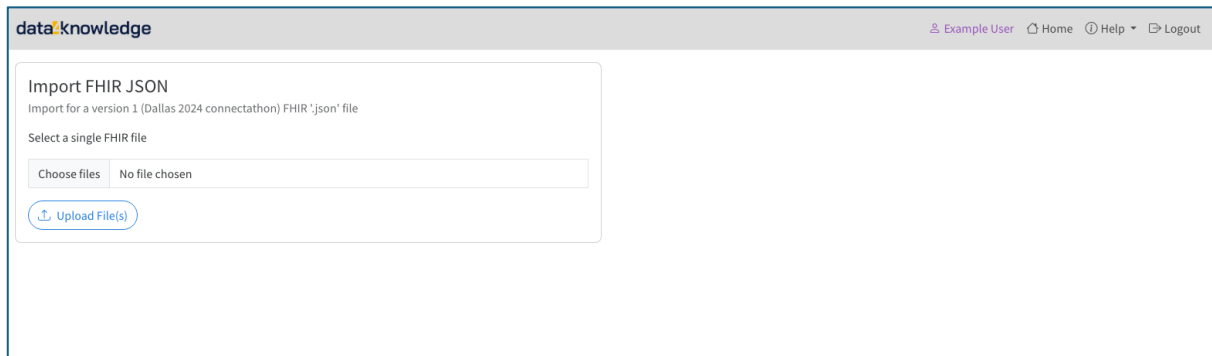

Return to the home page. An entry for the file loaded should be present containing high level information about the protocol. Note the blue “M11 Document” load type indicator.

M11 Protocol in FHIR V1 Message (.json) Import

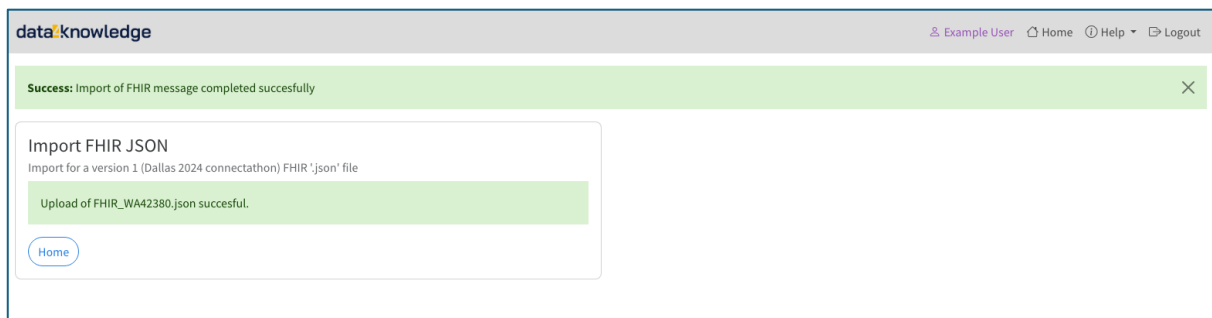

Click on the import menu and select the M11 FHIR v1 option. The import page will be displayed.

The screenshot shows the 'Import FHIR JSON' page in the 'dataknowledge' application. The page has a header with the logo and user information (Example User, Home, Help, Logout). The main content area is titled 'Import FHIR JSON' and includes a subtitle 'Import for a version 1 (Dallas 2024 connectathon) FHIR '.json' file'. Below this, it says 'Select a single FHIR file'. There is a file selection area with a 'Choose files' button and a 'No file chosen' status. At the bottom of this section is an 'Upload File(s)' button with an upward arrow icon.

Click “Choose Files” and use the normal file selection mechanism to select a single M11 FHIR JSON file.

Click “Upload File(s)”. The system will respond saying the file is uploaded and then shortly after a “success” message should appear as follows.

The screenshot shows the 'Import FHIR JSON' page after a successful upload. A green success banner at the top reads 'Success: Import of FHIR message completed successfully'. Below this, the page title 'Import FHIR JSON' and subtitle 'Import for a version 1 (Dallas 2024 connectathon) FHIR '.json' file' are still present. A green box in the center contains the message 'Upload of FHIR_WA42380.json succesful.'. At the bottom of the main content area is a 'Home' button.

Return to the home page. An entry for the protocol loaded should be present. Note the red “FHIR” type indicator.

RADVAX™: A Stratified Phase I Trial of Pembrolizumab with Hypofractionated Radiotherapy in Patients with Advanced and Metastatic Cancers

Sponsor: University of Pennsylvania | Phase: Phase I Trial | Identifier: IRB# 821403 | Version:

Summary: Study Design

Overall Design

Key aspects of the design

Key aspects of the trial design are summarised below.

Intervention Model:	Open Label	Population Type:	With disease
Control Type:	N/A	Population Diagnosis or Condition:	Metastatic Cancer
Control Description:	N/A	Population Age:	Minimum 18 year of age

Trial Schema

Overall trial schema

Objectives, Endpoints, Estimands

Estimands, objectives and associated endpoints

Objective: To determine the safety of combining Pembrolizumab with hypofractionated radiotherapy in patients with advanced and metastatic cancers.

Hypothesis: Pembrolizumab will be safe and well tolerated in patients with advanced and metastatic cancers when combined with hypofractionated radiotherapy.

Interventions

Overview of Trial Interventions

Export

The Export menu on the details view page allows for a study to be exported as a

1. FHIR v1 message in JSON format
2. USDM model in JSON format
3. The protocol rendering as a PDF

The downloads work in the standard way.

Version History and Differences

The version history for a given study / protocol and import type can be viewed via the details page. The USDM JSON can be viewed and, if multiple versions are stored, the differences can be inspected.
